## Abstracts

The global Resettable Thermal Fuse market size is predicted to grow from US\$ 1859 million in 2025 to US\$ 2685 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Resettable thermal fuse is a protective device used in electrical circuits to prevent overheating. It is designed to break the circuit when a specific temperature is exceeded and can automatically reset itself after cooling down, unlike traditional thermal fuses, which permanently break and need replacement once triggered. In 2024 the production was 1.64 billion units and the average price was \$1.1 per unit

Resettable thermal fuses are protection devices that utilize special polymeric or inorganic functional materials to sharply increase resistance and interrupt the circuit when overheating occurs, and to automatically restore conductivity once the temperature decreases. They offer advantages such as fast response, reusability, and cost efficiency. With rising demand for reliable thermal protection in electric vehicles, energy storage systems, consumer electronics, and smart appliances, the market outlook is highly promising. Looking ahead, as products evolve toward miniaturization, higher current-handling capacity, and integration with intelligent monitoring systems, applications in fast charging, automotive battery management systems, and green energy equipment are expected to expand significantly, creating new opportunities for manufacturers to differentiate performance and deliver system-level safety solutions.
