The global Residential Far Infrared Heaters market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Far infrared is the most efficient and comfortable wavelength of infrared, always the preferred choice for domestic interiors. With a low temperature, but a large surface area, far infrared panels are a low-energy heating solution that raise ambient heat levels by warming objects and surfaces, rather than the air.

Compared with conventional heating device, Far-infrared heat panels distribute the heating evenly, so there are fewer cold spots, more cost-effective, etc.
