## Abstracts

According to this study, the global Residential IP Proxy Service market size will reach US\$ 4382 million by 2031.

A Residential IP Proxy Service is a type of proxy service that routes internet traffic through IP addresses associated with residential devices, such as home computers or smartphones, to provide users with a more authentic and localized online presence. Unlike data center proxies, which are often flagged as non-human, residential IP proxies mimic real users' IPs from specific geographic locations, making them ideal for tasks like web scraping, ad verification, market research, and bypassing geo-restrictions. These services typically pool IP addresses from a vast network of residential devices, offering high anonymity and bypassing anti-bot measures more effectively. Users can select proxies by country, city, or region to simulate organic traffic, enhancing the success rate of their online activities while maintaining privacy and security.

United States market for Residential IP Proxy Service is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
