This report mainly studies Residential Solar Shades market. Solar Shading Systems is Shading against solar heat gain is the most readily applicable and flexible method of cooling and can be applied in all climate types in which the sun's influence is significant, and to almost all modern buildings irrespective of latitude.

At present, in the foreign industrial developed countries the Solar Shading Systems industry is generally at a more advanced level, the world's large enterprises and production are mainly concentrated in the United States, Europe, etc. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position. The European and American markets are relatively mature, with the main players in the market such as Hunter Douglas, Warema, Lutron, Kawneer and Draper. At the same time, the market for China's solar shading systems seems to be just getting started, and the market potential is huge. Most Chinese manufacturers have low incomes and relatively weak market share. Today's industrial marketplace is increasingly competitive and requires the ability to reduce costs, raise production and increase accuracy for any business that is going to survive. For businesses that will truly thrive, the ability to lead development and get products to market faster is also critical. In addition, the impact on the cost and availability of raw

materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.
