The global Residual Solvent Testing market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Residual solvent testing refers to the analysis and measurement of potentially harmful solvents that may remain in a product or substance after a manufacturing or production process. This type of testing is commonly associated with the pharmaceutical, food, cannabis, and other industries where the presence of residual solvents can have implications for safety, quality, and regulatory compliance.

Continued advancements in analytical techniques, such as gas chromatography-mass spectrometry (GC-MS), liquid chromatography-mass spectrometry (LC-MS), and nuclear magnetic resonance (NMR), have been contributing to increased sensitivity, specificity, and speed in detecting and quantifying residual solvents.
