Resin coated aluminum pigment is a pigment that has undergone special processing. It is based on aluminum pigment and uniformly coated with a layer of resin material on its surface. Aluminum pigments themselves have good metallic luster, high reflectivity, and unique visual effects, and are widely used in coatings, inks, plastics, and other fields to provide metallic texture and decorative properties. The coated resin layer endows the aluminum pigment with additional properties, such as improving its weather resistance, corrosion resistance, dispersibility, chemical stability, etc., enabling it to maintain good performance and appearance under a wider range of environmental and application conditions.
