Resistance welding is a welding technology widely used in manufacturing industry for joining metal sheets and components. The weld is made by conducting a strong current through the metal combination to heat up and finally melt the metals at localized point(s) predetermined by the design of the electrodes and/or the work pieces to be welded. A force is always applied before, during and after the application of current to confine the contact area at the weld interfaces and, in some applications, to forge the work pieces.

Global Resistance Welding Machine key players include ARO Technologies, Fronius International, Nippon Avionics, etc. Global top three manufacturers hold a share over 20%.

Europe is the largest market, with a share about 25%, followed by China, and North America, both have a share over 40 percent.

In terms of product, Semi - Automatic Resistance Welding Machine is the largest segment, with a share over 45%. And in terms of application, the largest application is Automobile Industrial, followed by Domestic Appliances Industrial, Aircraft Construction, etc.
