Resistant dextrin is a low-calorie dextran, which is extracted and refined by industrial technology from the indigestible components of roasted dextrin. It is a white or light yellow powder with low sweetness (about ten times the sweetness of sucrose) One), no other odor, soluble in water. The aqueous solution of resistant dextrin has a very low viscosity, and the viscosity value changes little with the shear rate and temperature, does not precipitate for a long time, and has excellent characteristics such as osmotic pressure and freezing point. It is a low-calorie soluble food material. Because of its high digestive tolerance, low glycemic index, low insulin index, low calorie, and easy dissolution, it can lower blood sugar, blood fat, and maintain the intestinal tract. This paper mainly studies the resistant dextrin liquid.
