When the resonance liposuction equipment works, it emits mechanical resonance waves with the same natural frequency as fat cells, selectively crushes and emulsifies fat cells, effectively protects nerve and blood vessels, and uses negative pressure to suck fat out of the body. The resonance liposuction equipment can suck out the deeply dissolved fat cells out of the body while dissolving fat, which greatly shortens the operation time, significantly increases the amount of liposuction, and the effect is better

than that of traditional liposuction.
