The restaurant fume detector alarm is an intelligent device specifically designed to monitor the concentration of cooking fumes emitted from restaurant kitchens. It can detect the emission levels of pollutants such as fume particulate matter and volatile organic compounds (VOCs) in real time, and issue an audible and visual alarm or remote alarm signal when the emission exceeds the standard. This device is typically equipped with a highly sensitive sensor and a data communication module, and can be connected to an environmental monitoring platform to meet the requirements of urban restaurant fume management and environmental law enforcement. It is widely used in restaurants, canteens, fast food chains, and other places, helping to reduce air pollution and improve environmental management. In 2024, sales volume will be 6.75 million units, with an average price of US$115, a single-line production capacity of 350,000 units, and a gross profit margin of 55%. Typically, each restaurant is equipped with one unit.
