## Abstracts

The global Restaurant Service Robot market size is predicted to grow from US\$ 1482 million in 2025 to US\$ 4928 million in 2032; it is expected to grow at a CAGR of 19.1% from 2026 to 2032.

Restaurant service robots involve automating tasks traditionally performed by restaurant employees. These tasks can be varied and include activities performed both in the restaurant's backend and frontend.

The market drivers for Restaurant Service Robot are the integration of technology in the standard processes of a restaurant, the better servicing of orders due to robots, the need to provide contactless services to consumers amid the Covid-19 pandemic, and the increasing demand for automation and efficiency in the food sector.

The constraints of Restaurant Service Robot are the high cost of installation and maintenance, the lack of human touch and emotional connection with customers, the potential technical glitches and malfunctions, and the ethical and social issues related to replacing human workers with robots.

The future opportunities for Restaurant Service Robot are the development of more advanced and intelligent robots that can provide personalized and interactive services, the expansion of robot applications in different segments of the food industry such as fast food, pizza, bakery, coffee, etc., and the creation of a unique and innovative dining experience that attracts more customers.
