Retail Electronic Article Surveillance (EAS) is a security system used in retail stores to prevent theft of merchandise. It typically involves attaching a small electronic tag to each item that is being sold. The tag contains a small radio frequency (RF) or electromagnetic (EM) transmitter that sends a signal to a receiver located at the store

entrance or exit.

When a tagged item passes through the EAS system, the receiver detects the signal from the tag and triggers an alarm to alert store personnel. This alerts the staff to check the item and to prevent any shoplifting attempts.

EAS systems are commonly used in stores such as supermarkets, department stores, and electronics retailers. They are considered an effective deterrent against theft and can help reduce the number of losses due to shoplifting.

There are several types of EAS systems available, including RF-based systems, EM-based systems, and acousto-magnetic (AM) systems. Each type has its advantages and disadvantages, and the choice of system depends on factors such as the type of merchandise being sold and the store layout.

Overall, EAS systems are an important tool for retailers to help prevent loss due to theft and to protect their merchandise
