Abstracts

The global Retail Inventory Robot market size is predicted to grow from US\$ 216 million in 2025 to US\$ 645 million in 2032; it is expected to grow at a CAGR of 16.8% from 2026 to 2032.

In 2025, global Retail Inventory Robot production reached approximately 3,800 units, with an average global market price of around 58,000 US\$/unit.

Retail Inventory Robot is an autonomous or semi-autonomous mobile robot used in retail stores to scan shelves, identify product availability, detect out-of-stock items, verify price labels, monitor planogram compliance, and collect real-time inventory data. It usually integrates cameras, RFID readers, LiDAR, SLAM navigation, cloud software, and AI image recognition, helping retailers replace or supplement manual shelf checking and improve store-level inventory accuracy.

Demand is mainly driven by labor shortages in retail, rising requirements for real-time shelf visibility, omnichannel fulfillment, shrinkage control, and higher operating efficiency in supermarkets, hypermarkets, pharmacies, DIY stores, apparel stores, and warehouse clubs. Business opportunities are concentrated in robot-as-a-service models, AI shelf analytics, RFID-based item-level inventory, integration with POS/ERP/WMS systems, and expansion from large retail chains to regional supermarkets and specialty stores. Future growth will depend on lower robot cost, stronger data accuracy, easier store deployment, and clear ROI for retailers.
