Photomask is always required to maintain its high quality due to the fact that photomask is the original plate of circuit patterns for semiconductor devices. In concert with the shrinkage of semiconductor device patterns, the demand for higher quality of photomask is becoming stronger and stronger, and similarly the demand for higher defect inspection ability of inspection tools that gives confirmation and assurance of photomask quality is stronger and stronger.

Particle contamination can disrupt and delay the photolithography process, resulting in yield and productivity losses. In order to avoid this, masks need to be routinely re-qualified.

Reticle Particle Detection System enables fabs to perform a complete inspection on each reticle prior to its use.
