Retinal Artificial Intelligence System is a technology that uses AI and machine learning to analyze retinal images for the detection and diagnosis of eye diseases and systemic conditions. By processing high-resolution images of the retina, these systems can identify early signs of conditions like diabetic retinopathy, age-related macular degeneration, and glaucoma. The AI algorithms are trained on large datasets, allowing them to detect abnormalities with high accuracy, often assisting or augmenting the work of ophthalmologists. This technology helps in providing early diagnosis, improving patient outcomes, and increasing access to eye care, particularly in remote or underserved areas.
