Retractable turnstiles are a channel control device that uses a retractable mechanical structure design to control the passage of people through the retraction and extension of the gate bar. The core feature of this device is that the gate bar can be retracted and moved horizontally, automatically retracted when authorized to pass, and remains in an extended state to block passage when unauthorized. Its structure is usually made of high-strength metal or composite materials, with anti-collision and anti-tailgating functions, suitable for places where flexible control of the flow of people and limited space is required, such as subway stations, gymnasiums, exhibition halls, etc. Retractable turnstiles can be linked with access control systems, ticketing systems or biometric terminals to achieve intelligent management, and support remote control and emergency mode switching to ensure rapid evacuation in emergencies.
