The global Retrieval-Augmented Generation market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Retrieval-Augmented Generation (RAG) is a natural language processing (NLP) model architecture that combines retrieval and generation techniques. In this architecture, the model first finds information (such as documents, sentences, etc.) related to the current task through a retrieval process, and then inputs this retrieved information as context into the generation model to produce more accurate and relevant text output. The purpose of this approach is to use the retrieved information to enhance the generation process so that it can generate content that is more in line with user intent and context.

United States market for Retrieval-Augmented Generation is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Retrieval-Augmented Generation is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Retrieval-Augmented Generation is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
