The global Retrofit Air Terminal Units market size is predicted to grow from US\$ 1318 million in 2025 to US\$ 1986 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2025, global Retrofit Air Terminal Units production reached approximately 550 K units, with an average global market price of around 2,450 US\$/unit.

Retrofit Air Terminal Units (RTUs) are specialized HVAC (Heating, Ventilation, and Air Conditioning) components designed to upgrade, replace, or modify existing air terminal units in commercial, industrial, or residential buildings without requiring full HVAC system overhauls. Unlike new-installation air terminal units, these retrofit units are engineered to be compatible with existing ductwork, control systems, and building structures, featuring compact designs, flexible mounting options, and adaptability to older HVAC infrastructure. They typically integrate air handling, temperature control, and airflow regulation functions, often incorporating energy-efficient components (such as variable air volume dampers, high-efficiency fans, and smart controls) to improve indoor air quality, reduce energy consumption, and enhance system performance. Retrofit Air Terminal Units are tailored to address the limitations of outdated units?such as poor energy efficiency, inadequate temperature control, or compatibility issues with modern building management systems?while minimizing installation time, disruption to building operations, and overall renovation costs.

The demand for Retrofit Air Terminal Units is driven by the global push for energy conservation, the aging of existing HVAC infrastructure in older buildings, and the growing need to improve indoor air quality and building energy efficiency. From the demand side, commercial buildings (offices, retail spaces, hospitals) and industrial

facilities with outdated air terminal units seek retrofit solutions to meet stricter energy efficiency standards and reduce operational costs; residential buildings undergoing energy upgrades also drive demand for compact, efficient retrofit units. Additionally, the trend toward smart building management systems and the need to enhance indoor air quality (post-pandemic) further fuel demand for retrofit units equipped with advanced controls and air purification features. In terms of business opportunities, developing energy-efficient, smart Retrofit Air Terminal Units compatible with a wide range of existing HVAC systems can address the core pain points of building owners. Providing customized retrofit solutions for different building types (commercial, industrial, residential) and offering turnkey installation and maintenance services can enhance market competitiveness. Cooperating with HVAC contractors, building renovation companies, and property management firms to expand distribution channels can capture market share. Furthermore, integrating IoT-enabled monitoring and remote control capabilities into retrofit units can improve product added value, while targeting emerging markets with aging building stock and growing energy conservation requirements can further expand market reach.
