## Abstracts

The global Reverse Osmosis Membrane Acid Cleaner market size is predicted to grow from US\$ 53.02 million in 2025 to US\$ 93.56 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

In 2025, global sales of Reverse Osmosis Membrane Acid Cleaners reached 45,000 tons, with an average selling price of US\$1,200 per ton. Reverse Osmosis Membrane Acid Cleaners are chemical products specifically designed for cleaning reverse osmosis membranes. They are primarily used to remove inorganic contaminants such as minerals, rust, and calcium scale that accumulate in reverse osmosis systems due to water quality issues or during use, restoring the membrane's filtration performance. These cleaning agents typically contain organic or inorganic acids, such as hydrochloric acid and sulfuric acid, which effectively dissolve scale without damaging the membrane structure. This product is widely used in water treatment, seawater desalination, power generation, pharmaceuticals, and food and beverage industries, especially in industrial production with high water quality requirements. The industry's total capacity is approximately 60,000 tons per year, with an average gross profit margin of about 25%. Upstream raw materials mainly include organic acids, inorganic acids, corrosion inhibitors, and other chemicals; downstream supply comes from water treatment companies, membrane cleaning service providers, and industrial equipment companies. The future lies in the development of environmentally friendly cleaning agents, improving cleaning effectiveness while reducing environmental impact. With the increasing demand for water recycling and wastewater treatment, the market demand for reverse osmosis membrane cleaning agents will steadily increase, and companies with innovative and environmentally friendly technologies will gain more business opportunities.

The market for Reverse Osmosis Membrane Acid Cleaner is steadily growing, benefiting from global water scarcity and the continued expansion of the water treatment industry, particularly in its widespread application in seawater desalination, industrial wastewater reuse, and drinking water purification. With the continuous advancement of water treatment technology and the widespread adoption of reverse osmosis membrane technology, the demand for membrane cleaning products is constantly increasing. Scale buildup on reverse osmosis membranes, especially the accumulation of calcium deposits, rust, and inorganic salts, has long been a key factor affecting membrane performance and lifespan. Therefore, effective cleaning solutions are essential for ensuring the efficient operation of membrane systems. In terms of product technology, environmentally friendly, low-corrosive, non-toxic, and highly efficient acidic cleaning agents are becoming a market trend, meeting increasingly stringent environmental regulations and users' demands for sustainability.

From a competitive perspective, major companies are consolidating their market share through technological innovation and customized product services, especially in high-end application areas such as the power, pharmaceutical, and food and beverage industries. Smaller companies have secured a certain share in regional markets through flexible customization and services. In the future, with the further development of the global water treatment industry, especially the advancement of environmental protection and water resource reuse policies, the market demand for reverse osmosis membrane cleaning agents will continue to rise. Companies with innovative formulations and environmentally friendly solutions will be well-positioned in this market segment and will have more business opportunities.
