Anthroplasty is a surgical reconstruction that relieves a patient from pain by regaining or reconstructing the original movement of damaged or degenerated joint. In case of reverse shoulder anthroplasty, the artificial parts are attached in reverse i.e., the socket to the bone of upper arm and glenoid ball to the shoulder blade. This reversal of joint has unique mechanical advantage. Reverse shoulder anthroplasty is employed in patients with severe arthritis, large glenohumeral fracture or rotator cuff arthropathy, or failure of normal total shoulder anthroplasty i.e., revision surgery.
