The global Revolving Automatic Door market size is predicted to grow from US$ 658 million in 2025 to US$ 815 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

An automatic door, also known as an auto door, is a door that opens automatically, usually on sensing the approach of a person. Revolving doors are ideal when climate control is a priority. Available in two-, three- and four-wing models, they guide traffic flow while providing superior separation of indoor and outdoor environments.

A revolving automatic door is a special type of automatic door that has the function of a revolving door. It drives the rotation of the door body through an automatic control system and a motor, so that pedestrians can enter or leave the building without pushing, pulling or rotating the door handle. Revolving automatic doors are usually widely used in places with high traffic, such as shopping malls, hotels, large office buildings, airports, etc. The revolving automatic door has multiple door wings, which can accommodate multiple pedestrians to enter and exit at the same time, and is suitable for high-traffic places. Compared with traditional sliding doors or revolving doors, revolving automatic doors are more compact in door body design, which helps to save space. The revolving automatic door is equipped with sensors, which can automatically sense the approach of pedestrians and automatically start the door rotation as needed.
