The rework wafer cleaning machine is a device used to clean rework wafers in semiconductor production. In the semiconductor manufacturing process, due to some reasons (such as process problems, equipment failures, etc.), some of the produced wafers may not be able to continue to be used. These wafers that cannot be continued to be produced are called rework wafers. To maximize resource utilization and reduce waste, these rework pieces are often reprocessed and cleaned so they can be put back into the production line.

The global Rework Film Cleaning Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
