RF Circulator is a three-port device used to isolate the transmitted and received signals in the fields of radar, active electronic scanning antenna (AESA) array, satellite communication and telecommunications. Isolator is an improved circulator with a port matching the impedance terminal. Loops and isolators are commonly used to protect sensitive receiving circuits from high-power transmitter output by isolating the transmitted signal from the received signal at the radar input.

The global market for RF Circulator and Isolator is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC RF Circulator and Isolator market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States RF Circulator and Isolator market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe RF Circulator and Isolator market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China RF Circulator and Isolator market is expected at value of US\$ million in 2022

and grow at approximately % CAGR during 2022 and 2028.

Global key RF Circulator and Isolator players cover Anatech Microwave Company, DiTom Microwave, L3 Narda-MITEQ, Molex and Skyworks Solutions Inc. and etc. In terms of revenue, the global largest two companies occupy a share nearly % in 2021.
