An RF Circulator is a 3 Port ferromagnetic device used to regulate the signal flow within a circuit. It transmits an input signal in one direction – A signal that enters port 1 is transmitted to port 2 and isolated from port 3, a signal incident at port 2 is transmitted to port 3 and isolated from port 1, a signal incident at port 3 is transmitted to port 1 and isolated from port 2. Circulators are typically designed to have minimal loss when transmitting an input signal from one port to the next.
