The global RF Coaxial Probes market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

RF coaxial probe is a device used to measure radio frequency signals in electronic circuits and is part of electronic test instruments. RF coaxial probes usually consist of inner and outer conductors and an insulator between the inner and outer conductors. The outer conductor includes a fixed cylinder and a detection cylinder. The expansion conductor is tightly fitted on the detection cylinder and is used to collect test signals from the reserved RF signal test points on the board under test. It is mainly used in the field of measuring radio frequency signals in electronic circuits, and can also be used in the field of radio frequency interconnections with high density and narrow spacing.
