According to this study, the global RF Feeder System market size will reach US\$ 165960 million by 2031.

RF Feeder System is used for communication equipment in specific locations, and signal transmission between remote locations. For underground applications or tunnels, leak coaxial cables are used in which the external conductor is processed to create a signal leakage slot so the cable functions as the antenna.

Feeders or transmission lines are used to transfer RF signals from one point to another. They are used in many areas, one common example of an RF feeder is the coax or coaxial cable used to connect a television antenna to the television.
