RF Lightning Arrester is a device specifically designed to limit radio frequency electromagnetic wave interference. It suppresses radio frequency signals on power lines to prevent them from entering the interior of equipment, thereby protecting the equipment from the effects of radio frequency interference. Radio frequency lightning arresters are generally composed of magnetic rings, magnetic beads, capacitors, etc. Magnetic rings and magnetic beads are used to filter out radio frequency signals, while capacitors are used to isolate DC power lines and radio frequency signals. The selection of RF lightning arrester needs to consider its rated current, frequency range, size and other parameters to ensure that it can meet the requirements of specific application scenarios.
