RF and EMF shielding fabric is a type of textile material constructed with specialized fibers or coating designed to mitigate the transmission or penetration of electromagnetic fields, such as radio waves or electric and magnetic signals.

The fabric is engineered to absorb, reflect, or attenuate electromagnetic radiation, serving as a protective barrier against radio frequency interference (RFI) or electromagnetic interference (EMI). It is commonly used in applications where it is necessary to reduce or block the exposure to electromagnetic fields, such as in electronics manufacturing, telecommunications, or medical equipment settings.

The RF and EMF shielding fabric can be used in various forms, including sheets, curtains, clothing, or enclosures. It is designed to provide a conductive or reflective surface that prevents electromagnetic waves from passing through or penetrating sensitive equipment or human bodies.

By using RF and EMF shielding fabric, it is possible to create shielded compartments or clothing to mitigate electromagnetic interference, protect sensitive electronics, or reduce human exposure to potentially harmful electromagnetic fields. The fabric may incorporate materials like copper, silver, nickel, or conductive fibers to enhance its shielding properties and provide effective electromagnetic shielding.
