The global RF Plasma Generator market size is predicted to grow from US\$ 831 million in 2025 to US\$ 1766 million in 2032; it is expected to grow at a CAGR of 11.6% from 2026 to 2032.

RF generator is the core component of plasma processing equipment. Its working principle is to use a vacuum pump to obtain a certain degree of vacuum in a closed vacuum pressure vessel, and then RF is fed between the two substrates of the vacuum chamber, generating a variable electric field between the two plates. The gas is ionized in the electric field, producing corresponding ions. Charged particles are accelerated and continuously collide with gas molecules to produce a cascade effect, thereby generating plasma.

Global key players of RF Power Supply for Semiconductor include MKS Instruments, Advanced Energy, DAIHEN Corporation, XP Power (Comdel) and Trumpf. The top three players hold a share about 45%. North America is the largest producer, has a share about 35%, followed by Japan and Europe, with share 23% and 20%, respectively. The largest market is North America, with a share about 38%, followed by Asia-Pacific and Europe, with share 29% and 28%, separately. In terms of product type, 13.56MHz is the largest segment, with a share over 30%. In terms of application, Etching is the largest market, with a share over 35%.
