Radio frequency plasma power supply is a power supply device used to generate radio frequency plasma. Radio frequency plasma is a high-energy gas composed of ionized gas molecules and free electrons. The RF plasma power supply ionizes gas molecules to form plasma by providing high-frequency electric fields and currents. Radio frequency plasma power supply usually consists of the following main parts: 1. High-frequency generator: a device that generates high-frequency electric fields and currents. Radio frequency (Radio Frequency) power supply is usually used. Common frequencies are 13.56 MHz, 27.12 MHz, etc. 2. Matching network: used to match the impedance of the power output and plasma load to ensure the effectiveness and stability of energy transmission. 3. Plasma reaction chamber: Contains the plasma generation area, usually a closed space filled with gases, such as argon, nitrogen, etc. 4. Control system:

used to control the working parameters of the radio frequency plasma power supply, such as frequency, power, etc.
