The global RF Video Splitter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A video RF splitter is a device used for distributing video signals, typically used for television signal distribution and sharing. RF is the abbreviation for 'Radio Frequency', which is mainly used for processing RF signals, especially for distributing analog TV signals (such as cable TV signals or terrestrial TV signals). The working principle of a video RF splitter is to input a video signal and then divide it into multiple outputs for use by multiple televisions or monitors. They usually have one input port and multiple output ports, and the number of output ports can vary according to specific needs. In a home environment, video RF splitters are typically used to distribute cable or satellite TV signals to multiple televisions to achieve the function of viewing the same channel in different rooms. In commercial or surveillance systems, video RF splitters can be used to distribute video signals from surveillance cameras to multiple monitors or displays, in order to achieve monitoring from multiple observation points. The video RF splitter can be used to allocate standard definition (SD) video signals and high-definition (HD) video signals, depending on the frequency range and signal type it supports. Some video RF splitters can also have amplification function to ensure signal quality is maintained during long-distance transmission. It should be noted that with the popularization of digital technology, many new video distribution devices and technologies have emerged, such as digital video distributors and network video stream distribution systems. These new technologies are more suitable for processing digital video signals, with higher resolution and more flexible configuration options. However, traditional video RF splitters are still very useful in certain applications, especially when processing analog RF signals.

United States market for RF Video Splitter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for RF Video Splitter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for RF Video Splitter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key RF Video Splitter players cover Analog Devices, ZeeVee, CommScope, Corning, Antronix, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
