The global RFCMOS MMIC market size is predicted to grow from US$ 305 million in 2025 to US$ 825 million in 2032; it is expected to grow at a CAGR of 15.6% from 2026 to 2032.

RFCMOS MMIC is high-integration microwave monolithic integrated circuits based on CMOS technology that provide compact, cost-effective, and high-performance wireless transmission and reception solutions for applications such as automotive radar, industrial radar, and IoT devices. In 2024, the production volume of RFCMOS MMIC chips is approximately 22.5 million units, with an average price of USD 12 per unit. The industry operates at a capacity utilization rate of about 51%, with a gross margin of approximately 55%. The production of RFCMOS MMIC chips begins with essential upstream raw materials, including silicon wafers, photoresist, photolithography machines, and etching machines, which are critical for achieving precise semiconductor processing. Representative suppliers include ASML (photolithography machines), Tokyo Electron (etching machines), and Applied Materials (photoresist), which provide the core equipment and materials necessary for RFCMOS MMIC production. The midstream focuses on system architecture design, analog front-end development, circuit integration, digital signal processing, mixed-signal verification, and wafer-level management, where innovation directly impacts the performance and integration of MMICs. In the downstream, RFCMOS MMIC chips are widely used in automotive radar and industrial radar systems, with companies such as Valeo, Continental, and Aptiv adopting this high-integration solution to reduce costs, shrink size, and improve overall performance. Currently, the RFCMOS MMIC market is primarily dominated by NXP Semiconductors and Texas Instruments. Ten years ago, automotive radar transceivers mainly relied on the SiGe approach, which offered excellent RF performance but could not integrate digital circuits like MCUs and DSPs into the same chip, requiring multiple independent chips. Around 2017, TI was the first to introduce a single-chip millimeter-wave radar based on RFCMOS technology, integrating the RF front end, ADC, DSP,

and MCU into a single CMOS chip, significantly increasing integration and reducing system costs. NXP followed by launching its own high-integration RFCMOS solution, combining the RF front end with its powerful S32 processor architecture, locking in numerous Tier 1 customers. Although Infineon had advantages in the SiGe domain, it failed to transition to RFCMOS technology in time, missing the key market window for high-integration radar solutions.

United States market for RFCMOS MMIC is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for RFCMOS MMIC is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for RFCMOS MMIC is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key RFCMOS MMIC players cover NXP Semiconductors, Texas Instruments, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
