The global RFI and EMI Shielding Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

RFI (Radio Frequency Interference, radio frequency interference) and EMI (Electromagnetic Interference, electromagnetic interference) shielding material is a material used to reduce or block radio frequency and electromagnetic frequency interference. They are commonly used in applications such as electronic equipment, communication equipment, aerospace equipment, medical equipment, military equipment, etc., to prevent electromagnetic radiation from interfering with the normal operation of other equipment, or to prevent external electromagnetic radiation from interfering with the equipment. RFI and EMI shielding materials are usually made of conductive materials or magnetic materials, which have good electromagnetic shielding performance and can absorb, reflect or conduct electromagnetic waves, thereby reducing or preventing the propagation of interference signals. These shielding materials can exist in different forms, such as films, coatings, embedded materials, impedance matching layers, etc. They can be used on equipment casings, cables, connectors, circuit boards and other components to effectively reduce or eliminate the effects of electromagnetic interference.

United States market for RFI and EMI Shielding Materials is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
