This report focus on RFID Door Cards market.

RFID stands for “Radio Frequency Identification,” and as with most modern technology today, it is associated with a chip. Specifically, objects equipped with RFID contain a small chip programmed with data, along with a tiny antenna that transmits that data via a weak signal to nearby receivers.

We see it on our credit cards which are now trading the familiar magnetic strip for enhanced chip technology. We also use RFID in key cards which can be programmed to unlock doors when the card is placed near a receiver at the entry point. In the context of key control, the RFID card replaces the standard lock-and-key system for entry. You place the card on or near the reader, the reader identifies the signal as belonging to an authorized user, and the door unlocks.

RFID technology plays a vital role in the government, residential, and other sectors. The safety and security of personal assets & information and law enforcements are the major concerns behind the adoption of RFID technology in the government sector. Several government organizations and forensic departments use RFID locks for access control of sensitive centers of information, employee authentication, and others.
