The global RFID Dry Inlay market size is predicted to grow from US$ 1065 million in 2025 to US$ 2167 million in 2032; it is expected to grow at a CAGR of 10.9% from 2026 to 2032.

RFID dry inlays refer to the core module of RFID electronic tags without an adhesive layer. The chip and antenna are directly connected and fixed to the substrate. Their structure is simplified, requiring external encapsulation or specific mounting methods for application on object surfaces. They are suitable for automated integration scenarios with special requirements for thickness, flexibility, or subsequent processing. Upstream suppliers include chip design and manufacturing, antenna materials (such as aluminum foil/etched copper), and substrates (PET/paper, etc.). Downstream suppliers cater to system integrators, encapsulating dry inlays into various tags for final application in retail, logistics, healthcare, asset management, and other fields. In 2024, the global RFID dry inlay market had a unit price of $530 per thousand units, with sales of approximately 1.85 billion units and global production capacity of 2-2.5 billion units. The industry profit margin was 25-30%.
