RFID is an automated data-capture technology that can be used to electronically identify, track, and store information contained on a tag. A radio frequency reader scans the tag for data and sends the information to a database, which stores the data contained on the tag. The main technology components of an RFID system are the tag, reader, and database.

This system can be installed without tearing up the road, also this system can collect the data from the passing vehicles, identify the license plate and vehicle model and RFID electronic tag, retrieve the related registration information from database, match registration information with the data ETC system collected, prevent switching license plates, collect the tolls automatically without having vehicles to slow down to pay.
