The global RGB-IR Face Recognition Module market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

RGB-IR face recognition module combines the advantages of visible light (RGB) images and infrared (IR) images to achieve all-weather face recognition. In visible light environments, the module uses an RGB camera to capture facial texture, color and other details; at night or in dimly lit environments, it automatically switches to infrared mode and uses an infrared camera to capture the thermal radiation information of the face. By fusing the information of the two images, the RGB-IR face recognition module can maintain a high recognition rate and stability under various lighting conditions. The module is widely used in smart door locks, smart phones, surveillance cameras and other products to provide users with a more intelligent and convenient face recognition experience.

United States market for RGB-IR Face Recognition Module is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
