Rhinology shaver is specially designed for ENT procedures for stress-free and ergonomic application in minimally invasive ENT procedures for shaving and removing tissue, hard tissue or bone. Therefore, the razor blade simply draws the tissue through the cutting window into the lumen. Due to the strong rotation of the inner tube, the aspirated tissue is then removed through a hose attached to the suction pump. The easy-to-lock and tip swivel mechanism allows the blade to be rotated and locked in place for safe and flawless access to the operating area.
