The global Ribbed Belt market size is predicted to grow from US$ 3869 million in 2025 to US$ 5805 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

Ribbed belt is a flexible transmission belt with multiple wedge-shaped ribs distributed along the length direction on the inner side of the belt. It combines the high friction of V-belt with the flexibility of flat belt, and can achieve efficient and stable power transmission under small pulley diameter and high-speed conditions. Its structure is usually composed of a rubber matrix and a high-strength fiber reinforcement layer, which has the characteristics of high transmission efficiency, low vibration, low noise, and compact structure. In 2025, global Ribbed Belt production reached approximately 1,236 M Units, with an average global market price of around US$ 3.2 per unit.

Ribbed belt belong to the mature transmission component industry, presenting overall characteristics of 'large scale, strong stability, and continuous technological optimization'.

From the perspective of demand structure, the automotive industry occupies a dominant position, especially the after-sales replacement market, which constitutes a long-term stable source of demand. Its growth relies more on the number of cars owned rather than new car sales, giving the industry strong resilience to cycles; The home appliances and industrial sectors provide supplementary demand.

From the perspective of technological evolution, multi ribbed belts are developing towards high-performance materials and system integration. For example, high durability materials such as EPDM are used to improve their lifespan and temperature resistance. At the same time, in some applications, elastic multi ribbed belts are being upgraded to reduce tensioning devices, system complexity, and costs.

From a long-term trend perspective, traditional fuel vehicles and hybrid power will still support the demand for multi wedge belts. However, with the advancement of electrification, the replacement of engine accessory systems by pure electric vehicles will gradually weaken their new demand, and the industry will shift from incremental driving to stock and after-sales driving.
