The global Rice Destoning Machine market size is predicted to grow from US$ 207 million in 2025 to US$ 268 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

In 2024, global Rice Destoning Machine production reached approximately 27.14 k units, with an average global market price of around US$ 7500 per unit. A rice destoning machine is a specialized grain cleaning equipment that separates and removes high-density impurities—such as stones of similar size to rice kernels (called "same-size stones"), metal particles, and glass fragments—from paddy or milled rice based on the principle of specific gravity difference. Its core component is an inclined, reciprocating sieve deck with an upward air current passing through it. By adjusting the air velocity and the motion of the sieve, the material becomes fluidized. The denser stones sink to the bottom layer and contact the sieve surface, moving upward due to inertia and friction to be discharged from the stone outlet. Meanwhile, the less dense rice grains float on the upper layer and flow downward by gravity to be discharged from the rice outlet, achieving highly efficient separation.

United States market for Rice Destoning Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Rice Destoning Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Rice Destoning Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
