The report requires updating with new data and is sent in 48 hours after order is placed.

Ridge ventilators are a device for roof ventilation that are typically installed on the ridge line (also called a ridge) of the roof. Its function is to allow air to flow under the roof, thereby effectively removing heat and moisture and keeping the air in the house fresh and comfortable.

Ridge Ventilators typically consist of a series of vents or slits installed along the top of the roof's ridgeline. These vents or slits allow hot air and moisture to rise from the inside of the roof and out to the outdoors along the ridge roof ventilator's vents or slits. This type of ventilation helps reduce heat buildup under the roof and prevents moisture-induced roof condensation and mold problems.
