## Abstracts

The global Right-Angle Silicon Carbide Rod market size is predicted to grow from US\$ 9.42 million in 2025 to US\$ 15.45 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

In 2025, global production of right-angle silicon carbide rods reached 116,000 units, with an estimated average selling price of US\$83 per unit. Right-angle silicon carbide rods are a type of irregularly shaped silicon carbide heating element. They refer to high-temperature silicon carbide heating elements where the heating section and the cold end or wiring terminal are connected at approximately a 90° right angle. They are made primarily of high-purity silicon carbide, through molding, high-temperature siliconization/recrystallization, resistance matching, low-resistance cold end treatment, and end metallization. The upstream mainly includes green silicon carbide micro powder, petroleum coke, quartz sand/silicon source, carbon materials, binders, metallic silicon, aluminum spraying materials, ceramic insulating parts, electrode clamps, and packaging materials; the midstream includes billet forming, silanization/recrystallization sintering, right-angle cold-end connection, resistance sorting, end metallization, size customization, and factory inspection; the downstream mainly serves industrial furnace manufacturers, ceramics and refractory material companies, glass and fiberglass companies, powder metallurgy companies, magnetic materials and electronic ceramics companies, and laboratory furnace equipment manufacturers. Gross profit margin is approximately 25%-40%.
