Rigid Cervical Collars are medical devices designed to provide immobilization and support to the cervical spine (neck) in emergency situations, especially when there is a suspicion of neck injury or trauma.

Rigid Cervical Collars are typically made of materials like hard plastic or foam, which provide a high degree of support and immobilization. The interior is often padded for patient comfort. These collars are constructed from stiff and hard materials to restrict movement of the neck and prevent further injury to the spine. The primary purpose of rigid cervical collars is to stabilize the cervical spine and limit neck movement. They are commonly used in cases of suspected neck injuries, such as those resulting from motor vehicle accidents, falls, or sports injuries, to maintain the neck in a neutral position until further assessment can be conducted.
