The research report highlights the growth potential of the global Rigid-Flex PCBs (RFPC) market. Rigid-Flex PCBs (RFPC) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Rigid-Flex PCBs (RFPC). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Rigid-Flex PCBs (RFPC) market.

Rigid-Flex PCBs (RFPC) combine the technologies of flexible and rigid boards. They typically consist of a multilayer flexible circuit substrate connected externally or internally to one or more rigid boards, depending on the design requirements of the application. Flexible substrates are designed to bend continuously, and curves are often formed during production or installation. The circuits of the hard board part and the flex board part are interconnected through plated through holes. Rigid-flex circuits offer higher component density and better quality control. The design is rigid and requires additional support and corners and areas that require extra space. The hard board and soft board go through a lamination process and are combined according to relevant process requirements to form a circuit board with the characteristics of FPC soft board and hard board PCB.
