Rigid polymer microfluidic chip is a microfluidic chip made of rigid polymer material. Microfluidic chip is a science and technology that is mainly characterized by the manipulation of fluids in micrometer-scale space. It integrates basic operating units (such as sample preparation, reaction, separation, detection, etc.) in chemistry, biology and other fields into a tiny chip. Rigid polymer materials have a series of unique physical and chemical properties that make them ideal for making microfluidic chips. Rigid polymers usually have high mechanical strength, chemical corrosion resistance and thermal stability, and can maintain stable performance in various harsh environments. In addition, rigid polymer materials also have good processing properties and can be made into microfluidic chips with complex structures through a variety of processing methods.

The global Rigid Polymer Microfluidic Chip market size is projected to grow from US\$ 372 million in 2024 to US\$ 894 million in 2030; it is expected to grow at a CAGR of 15.7% from 2024 to 2030.
