## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Ring Dryer is an extension to flash drying with the addition of a manifold classifier to allow semi-dry solids to internally circulate until fully dry, which allows the ring dryer to be more energy-efficient. With its short residence time of only a few seconds, the solids are not exposed to a high-heat environment for a long duration which results in ring dried product offering the highest product quality compared to products from other drying technologies. The versatility of the ring dryer design also accommodates variations in product grades and characteristics, including changes in moisture content, evaporation rate, and product composition that could affect drying behavior.
