A ring focus antenna (also known as a ring focus antenna) is a type of antenna used in electromagnetic wave communications and radar systems that is designed to focus incoming electromagnetic waves into a circular area. This antenna is characterized by a ring-shaped receiving or radiating structure that enables the signal to be focused and concentrated within the ring-shaped area.

A ring-focus antenna works similarly to a parabolic antenna, but instead of a point-like focal point, it has a circular area of focus. This makes ring-focus antennas advantageous in certain application scenarios, such as in communications or radar systems that need to cover a specific area.
