A ring joint gasket is a type of metallic gasket used in high-pressure and high-temperature applications, particularly in the oil and gas industry. It is designed to provide a reliable and leak-free sealing solution for flange connections. Ring joint gaskets are typically manufactured from solid metal, such as soft iron, low-carbon steel, stainless steel, or other alloys. They are available in various cross-sectional shapes, including oval, octagonal, and RX (reinforced) types, to match specific flange designs and standards.

Ring joint gaskets are commonly used in applications with high-pressure and high-temperature conditions, such as in oil and gas pipelines, refineries, petrochemical plants, and other industrial processes. They are known for their ability to withstand

extreme operating conditions, including high pressures, thermal cycling, and exposure to corrosive media.
