## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Ring Main Unit (RMU) is medium voltage switchgear that is employed in secondary distribution networks. They are utilized in-ring main electrical power distribution systems to provide a continuous power supply to the customer by shifting sources in event of any emergency or repair on the primary source. In many circumstances, the RMU switchgear may be holding idle for a period of years without activating. But, when a problem arises and a feeder goes out of operation, they need to function rapidly to move the supply to an alternate feeder so that the supply to the user is not disrupted and at the same time the distribution transformer is safeguarded.

The global market for Ring Main Unit (RMU) in Electrical Distribution System is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors.
