The global Ring Scan Endoscopic Ultrasound System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A ring scan endoscopic ultrasound system is a type of endoscopic ultrasound system that uses a rotating ring-shaped ultrasound transducer to produce 360-degree radial and sagittal images of the internal organs and structures.

The global market for endoscopic ultrasound (EUS) systems, which are used for diagnostic imaging and therapeutic interventions in gastroenterology and other medical specialties, was influenced by several key trends and developments. Continuous advancements in EUS technology were improving image quality, resolution, and diagnostic capabilities. Innovations included high-definition imaging, 3D/4D imaging, and advanced ultrasound probes. EUS was increasingly used for therapeutic interventions in addition to diagnostics. This included procedures such as fine-needle aspiration (FNA) and fine-needle biopsy (FNB) for tissue sampling, drainage of pseudocysts, and tumor ablation. EUS-FNA continued to be a vital application, particularly in the diagnosis and staging of gastrointestinal cancers and the evaluation of pancreatic lesions. Emerging markets, particularly in Asia and Latin America, showed significant growth in the demand for EUS systems as healthcare infrastructure improved and awareness of gastrointestinal health increased.
